Consolidated Statement of Financial Position

※Our company adopts a business model where we receive advance payments from customers at the time of contract and make upfront payments for things like license fees, which increases our total assets. The equity ratio may look low structurally, but that's because of the buildup of advance payments that will turn into future revenue.

(¥million)	FY2025	FY2026 2Q

Journey of Evolution into a Solid Recurring Business Model

1984 Founded
Import and domestic sales of advanced overseas technologies

1990
Launched financial and contracted systems development businesses (BS business)

1994
Launched software quality assurance business (SE business)

1996
Launched cybersecurity business (Information Infrastructure)

1996
Launched CRM business

1998
Launched medical system business

2012
Launched security-related operation and monitoring service (TPS) business

2012
Started providing cloud PACS "NOBORI" (Medical business)

Information Infrastructure Business

Application Services Business (CRM, SE, BS, EdTech businesses)

2021
Entered EdTech (education) business

2025
Launched providing quality control dashboard (SE business)

Medical System Business

2018
Spun off the Medical System Business (NOBORI Ltd.)

2022
PSP Corporation and NOBORI Ltd. were merged, with PSP Corporation as the surviving company.

Growth driven by two core pillars: Discovering and delivering overseas state-of-the-art technologies, and providing proprietary added value as best practices

- The information Infrastructure and SE Businesses, which provide overseas state-of-the-art technology, serve as our cash-generating engine (accounting for 75% of total revenue).
- The Medical System Business, which delivers best practices tailored to specialized industries and business types, has grown into a business exceeding 10 billion yen. In the Application Services Business, the CRM Business has scaled beyond 3.5 billion yen. While the EdTech Business requires upfront investment at this stage, we are developing it into a future growth pillar.

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

Even in the situation of an Anthropic Shock, our business strengths remain solid.

In early 2026, the launch of autonomous AI agents (e.g., Claude Cowork) by U.S.-based Anthropic PBC triggered a fundamental shift in the role of software, resulting in approximately 42 trillion yen ($285B) in market capitalization being wiped out from the software market.

1. End of traditional SaaS user-ID-based pricing model and GUIs

- **No need for GUIs:** We are entering an era where AI agents operate systems directly.
- **Collapse of ID-based pricing models:** User-based pricing models collapse as AI agents replace humans in task processing.

Impacted businesses are transitioning into "AI-era data foundations" (detailed on next Slide CRM Business)

2. Disappearance of low value-added SI businesses

- **Limits of man-month business model:** The time-based compensation business is no longer viable.
- **AI-driven in-house development:** As AI replaces coding, development man-hours drop drastically, accelerating in-house development.

Not applicable to our business portfolio

3. Liberation from legacy system maintenance

- **Automated modernization of legacy languages:** The emergence of tools like Claude Code enables automatic conversion of legacy systems into modern languages, eliminating the need for life-extension and maintenance

Not applicable to our business portfolio

4. Direct replacement of digital labor sourcing

- **Complete replacement of tasks:** AI agents take over the majority of simple digital tasks, leading to a sharp drop in unit pricing to a fraction of former levels.

Not applicable to our business portfolio

Even as AI Evolves, Our Growth Continues Accelerating

Information Infrastructure Business

- Control and defense mechanisms provided by security hardware cannot be replaced by AI.
- The needs for next-generation security solutions and security operations powered with AI are growing.
- New market opportunities are emerging in AI security.

CRM Business

- Human involvement remains indispensable for SLA responses requiring approval and emotional handling such as complaints.
- We are transitioning toward performance- and volume-based pricing models.
- An evolution into a data foundation for AI-enabled contact center operations creates a structure to scale revenue.

SE Business

- In core domains like automotive, stringent safety and accountability requirements, including ISO 26262, make complete AI replacement extremely difficult.
- The acceleration brought about by AI-driven development conversely heightens quality risks, dramatically increasing demand for verification, testing, and other services.

Medical System Business

- Increased processing speed and data volume driven by AI directly boost revenue growth under our usage and capacity-based pricing models.
- We are creating new revenue streams by proactively embedding AI into our proprietary services and delivering them to the market.

Growth Drivers and Further Growth Scenarios

Information Infrastructure

Current situation
(The numbers are last year's results)

- Stock ratio 87.9% (+5.6 points in 3 years).
- Backlog 78.8 billion yen (+18.9%).
- Revenue of 51.6 billion yen and operating profit of 6.6 billion yen, both record highs (+13.2%/+24.9%).

Growth driver

- Expanding the range of products, growing business in the 'AI security' area.
- Enhancing security operation services through AI use and collaboration with Firmus.
- Expanding into ASEAN (Malaysia, Singapore, etc.) centered around Firmus.

Growth Scenario

- A high stock ratio has increased backorders, and the rise in handled products is directly linked to business growth.
- Improving profit margins by expanding the security operations service business.

Application Services Business

Current situation
(The numbers are last year's results)

- Stock ratio 69.8% (+4.2 points in 3 years).
- Backlog 7.1 billion yen (+17.4%).
- Revenue hits a record high of 9.8 billion yen (+7.7%), EdTech posts an operating loss due to upfront investments.

Growth driver

- Enhancing the added value of CRM through the service commercialization of generative AI technology (such as FastGenie).
- Expansion of products handled in the SE business and deployment of in-house solutions.
- The full-scale expansion of EdTech in public schools.
- Expanding the CRM business in ASEAN and turning it profitable.

Growth Scenario

- The stock ratio has improved for CRM, SE, and EdTech. The backlog of orders keeps growing.
- Reducing sales losses for EdTech and CRM in ASEAN and making AI-related sales a new source of revenue.

Medical System Business

Current situation
(The numbers are last year's results)

- Stock ratio 61.0% (+11.1 points in 3 years).
- Backlog 19.4 billion yen (+23.6%).
- Revenue of 10.2 billion yen, operating profit of 1.3 billion yen (+1.1%/+6.1%).

Growth driver

- Accelerating the shift of PACS to the cloud and expanding its share.
- Expansion of new businesses in PHR and pathology fields.
- Expansion of the 'AI Image Diagnosis Support' Platform.
- Business expansion in ASEAN and other countries. (Thailand, Malaysia, Philippines, Nepal, etc.)

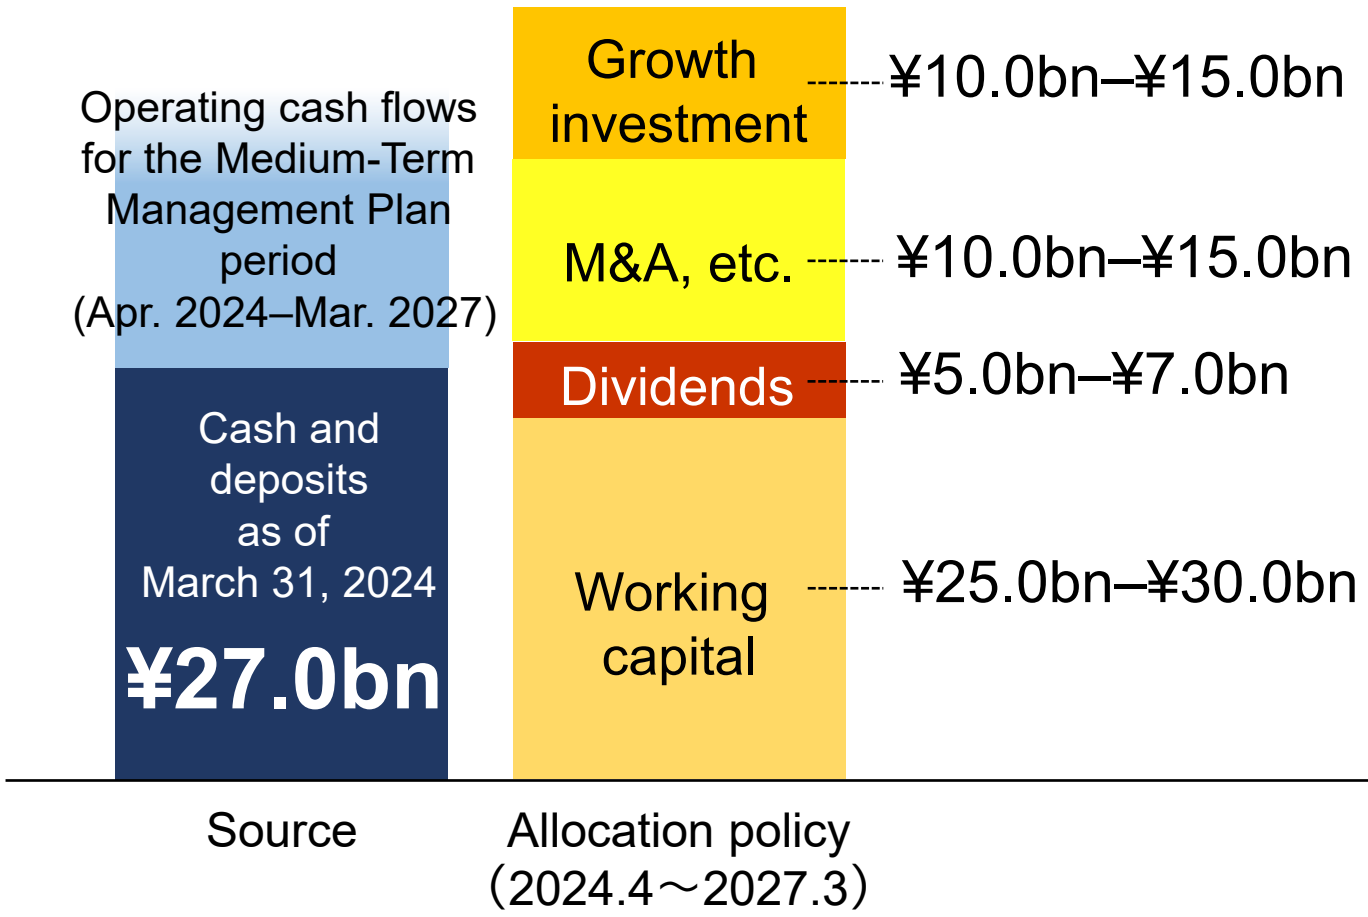
Growth Scenario

- With the shift of PACS to the cloud, the stock ratio has improved, and the backlog of orders has also grown.
- AI image diagnosis and digital pathology are advancing, and revenue contribution is set to accelerate in the next medium-term plan.

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

The disclosed capital allocation policy

The three-year capital allocation policy for the medium-term management period (FY2024–FY2026) announced in October 2025



Recruit and develop advanced IT talent, improve their working conditions, and invest in R&D

- Acquire talent to expand portfolio services.
- Invest in R&D to enhance and expand proprietary solutions.

M&A and capital and business alliances

- Acquire cutting-edge technology, specialized expertise, and talent.

Enhance shareholder returns

Funds for business continuity

- To ensure business continuity, working capital must cover not only routine operating costs but also approximately one month's worth of order value. This reflects the time lag between payments to overseas suppliers and the collection of customer payments. The required working capital is increasing due to multi-year large-scale contracts.

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

Investment Results for the First Two Years of FY2024–FY2026 Medium-Term Management Plan

Invested **approx. 17.5 billion yen** over the first two years

Growth investment for human capital

Approx. 10 billion yen

- **Accelerated recruitment and development of advanced IT talent ahead of schedule,** invested through the hiring of over 300 new employees and improvements in working conditions across group companies (**approx. 4.5 billion yen**).
- Drove the **expansion of proprietary solutions**, including feature enhancements such as AI diagnostic support in medical business, development of AI-powered product lines in CRM business, and cloud-based school administration support in EdTech business (**approx. 5.5 billion yen**).

Strategic M&A and R&D

Approx. 7.5 billion yen

Investments serving as future growth pillars.

- **Executed large-scale investments in Firmus Sdn. Bhd. in November 2024 and Medmain Inc. in March 2026.**

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

Future commitments: prioritizing and disciplined giving

1

Growth investment

(Continuing to invest in business growth and aiming for even more revenue growth.)

2

M&A, etc.

(Strategic business expansion and achieving discontinuous growth.)

3

Shareholder returns (dividends and share buybacks)

(When it comes to share buybacks, we aim to have a total payout ratio of 100%, and if we judge that there's a gap with the market valuation within that target range, we actively carry them out.)

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

Balancing growth and shareholder returns

Disciplined capital allocation policy targeting a 100% total payout ratio, while maintaining the principle of prioritizing growth investment and M&A

- Four-year period: FY2026-FY2029 (through the end of the next Medium-Term Management Plan)
- Conduct 3.2 billion yen in share buybacks to achieve a 100% total payout ratio for the current FY

  Maintain the current dividend policy targeting the higher of a 40% payout ratio or a 7% DOE

  Targeting a 100% total payout ratio in each fiscal year through dividends and flexible share buybacks

1. Steady expansion of recurring business leveraging foresight and business know-how
2. Continuous generation of robust operating cash flows

→ **Robust cash generation** →

3. Execution of strategic and proactive growth investments and M&A
4. **Policy to target a 100% total payout ratio (3.2 billion yen in share buybacks)**

- The 100% total payout ratio applies to future net income and is separate from funding for growth investments and M&A
- Continued execution of growth investments and M&A under a 100% total payout ratio policy.

  Maintaining financial flexibility through the use of cash on hand (¥25-30 billion working capital buffer) and debt financing as needed
- Further details on capital allocation will be presented with the next Medium-Term Management Plan.

Copyright (c) 2026 TechMatrix Corporation. All rights reserved.

Schedule for Share Buybacks

- Before the profits were finalized, we bought back our own shares in the 43rd term.
- The repurchase of our own shares from the 44th term onward is planned to be carried out after profits are confirmed.
